(54) METHOD FOR EASILY DISCRIMINATING PRESENCE OR ABSENCE OF FERTILITY RESTORATIVE GENE FOR RICE BT-TYPE MALE STERILE CYTOPLASM

(57)Abstract:

PROBLEM TO BE SOLVED: To provide a method for estimating seed purity by bulk method in detecting the presence/absence of the fertility restorative gene(Rf-1 gene) for the BT-type male sterile cytoplasm utilized in growing hybrid rice.

SOLUTION: The method for discriminating the presence/absence of the Rf-1 gene involves developing a marker specific to the Rf-1 gene and another marker specific to a rf-1 gene by focusing on a base sequence close to the Rf-1 locus, in view of the fact that the BT-type male sterile cytoplasm and the Rf-1 gene therefor have been utilized in growing hybrid rice.

LEGAL STATUS

[Date of request for examination]

[Date of sending the examiner's decision of rejection]

[Kind of final disposal of application other than the examiner's decision of rejection or application converted registration]

[Date of final disposal for application]

[Patent number]

[Date of registration]

[Number of appeal against examiner's decision of rejection]

[Date of requesting appeal against examiner's decision of rejection]

[Date of extinction of right]
